ubbink
Build smart.

Features & benefits

- Easy, quick, safe and clean installation
- Extremely airtight; Class D +/-2000 Pa
- Part of the TÜV SÜD certified Air Excellent system

AE48C connector kit

AE48C duct accessory kits

The Air Excellent duct accessory kits have been created so that installers do not have to think about which and how many seal and click rings they need to buy when they use our circular ducts' connectors and bends.

However, installers will still need to buy seal and click rings to make airtight connections between our circular ducts, the distribution boxes and the supply and extract valve adaptors, i.e. 2 of each per duct run.

AE48C bend kit

Extremely airtight connection mechanism

The Air Excellent EPDM seal rings and PP click rings have been developed to create extremely airtight connections between the Air Excellent circular ducts and the distribution boxes and circular ducts' accessories.
